

JORDAN RIVERA

Staff Platform Engineer

✉ jordan.rivera@example.com ☎ +1 555 0142 🔗 [linkedin.com/in/example-jordan-rivera](https://www.linkedin.com/in/example-jordan-rivera)

Profile

Results-oriented engineer with 12+ years building and operating distributed systems in regulated industries. Owns a design end to end: requirements, vendor trade-offs, and accountability once it is in production. Known for diagnosing problems other people have given up on.

Skills

Kubernetes • Terraform • Go • PostgreSQL • AWS • Observability • Incident response

Work Experience

Principal Platform Engineer / Northwind Logistics (Lisbon, Portugal)

March 2022 – Present, Freight tracking platform – 40M events/day

- Owned the architecture of the **event ingestion** platform handling 40M tracking events per day across 14 carrier integrations.
- Cut median ingestion latency from 900ms to 120ms by replacing a synchronous validation chain with a partitioned *Kafka* topology.
- When a carrier changed its API without notice, I led the incident and shipped the contract-testing suite that has caught four similar changes since.
- As the platform's technical owner, my responsibility covered on-call design, the error budget policy and quarterly capacity planning.
- Mentored four engineers through their first production designs; two now own services outright.

Senior Site Reliability Engineer / Meridian Health Systems (Barcelona, Spain)

August 2018 – February 2022, Clinical records platform (HIPAA/GDPR)

- Designed the **multi-region failover** for a clinical records system with a contractual 30-minute RTO, proven twice a year in full-scale DR exercises.
- Facing an audit finding on privileged access, I rebuilt the IAM model around least privilege across 9 teams without stopping delivery.
- Zero unplanned downtime was recorded in the 18 months after I rewrote the deployment pipeline to roll back automatically on SLO breach.
- Reduced cloud spend by 34% in one quarter by right-sizing stateful workloads and moving cold archives to lifecycle-managed object storage.

Backend Engineer / Cobalt Analytics (Berlin, Germany)

May 2014 – July 2018

- Built the query engine behind the customer-facing analytics product, in *Go*, serving ad-hoc aggregations over roughly 2TB of columnar data.
- To eliminate recurring nightly batch failures, I introduced idempotent job semantics and a replay tool, cutting weekly on-call pages from eleven to under two.
- Profiling work I led on the hot path removed a 40% CPU overhead caused by redundant deserialization.

Software Engineer / Harbourline Systems (Dublin, Ireland)

September 2009 – April 2014, Payments integration

- Developed the Java library integrating the payment product with six national banking networks.
- Introduced automated integration testing against bank sandboxes, replacing a two-day manual pre-release checklist.

Languages

English: native. Spanish: full professional working proficiency.

Professional Certifications

March 2025 : Certified Kubernetes Administrator (CKA)
September 2023 : AWS Solutions Architect – Associate
January 2022 : Google Cloud Professional Cloud Architect
June 2019 : DELE B2 (Spanish language proficiency)

Education:

June 2009: MSc in Computer Science, Example State University.

Lisbon, 2026/09/14
